PROG6212 : POE

Done By : Ibrahim Tagari (ST10062630)

Lecturer feedback and how it was implemented into the poe:

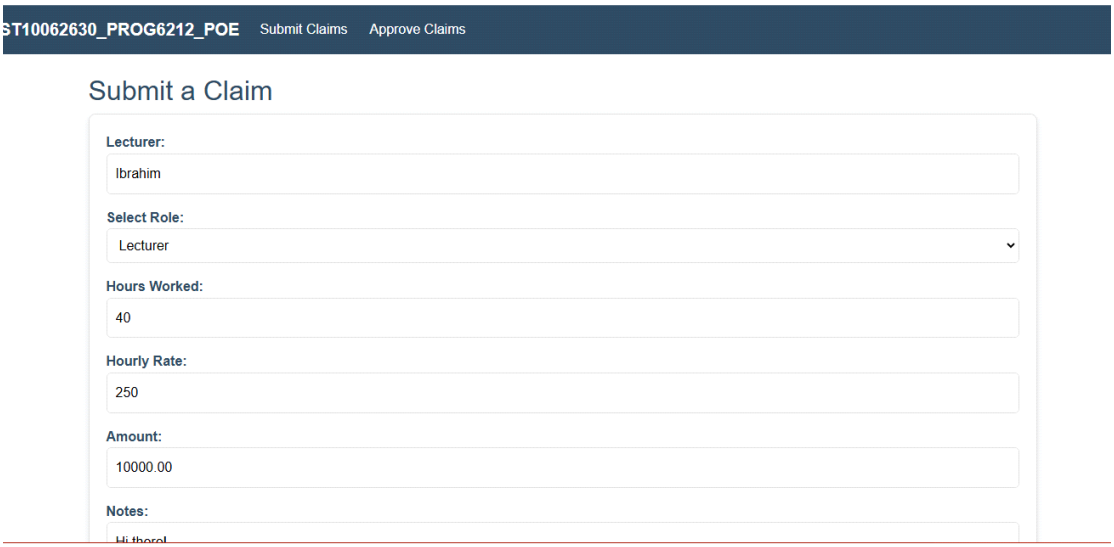

Developments from part 1 : I expanded on my work to develop the interface to allow for the claim approval and rejection fields to be displayed in the GUI (minimal to no functionality was required).

Developments from part 2 to the final POE : My part 1 and part 2 was done using WPF and not MVC , As per the lecturer feedback i changed the entire project into an ASP.NET Core Web Application (mvc) , i faced challenges such as redesigning and creating the interface as well as linking all the automations to the database , however this was an exciting task as it allowed me to broaden my perception of the foundational level of understanding in terms of web developpment integration with C#.
